2. Methodological studies about perception of legitimacy and institutional trust based on statistics and quantitative methods

Proposals must be focused on the methodological treatment of the collected data in the three waves of a longitudinal panel according to the following topics: (a) Latent variable modelling; (b) Analysis of cross-national survey data; (c) Longitudinal data analysis; (d) Measurement error, misclassification and missing data; (e) Multilevel modelling.

Activities

1 – Literature review on the mentioned topics;

2 - Participation in bi-weekly seminars with the research team to discuss the main theoretical and methodological questions of the project based on the literature review;

3 - Participation in monthly seminars at NEV/USP with the Centre Team;

4 - Data analysis of the panel data;

5 - Provide methodological training to the research team;

6 - Research report preparation;

7 - Participation in national and international research congresses or seminars;

8 - Production of (substantive or methodological) papers for publication in international journals.

9 - Participation in education, dissemination and knowledge transfer activities related to the project at NEV.
